

CyberSecurity Solutions

Integrated, layered IT/CyberSecurity tools and services protect against internal and external threats

Technology-based cybersecurity tools alone are not enough to protect an organization from disaster. The root cause of approximately 70% of all successful cybersecurity attacks can be traced back to actions taken (or not taken) by internal or trusted counter party sources. Whether it is clicking on the wrong link, failing to apply key network security patches or use of personal email, individuals at every level of the organization play a critical role in your security posture.

An effective cybersecurity solution begins with a solid backup/ disaster recovery plan, followed by an *effective, multi-layered approach to cybersecurity threat detection and risk mitigation*. Ignoring any layer in the process creates a crucial vulnerability ... much like leaving a back door, garage door or window open at home.

ProjexGuard™ provides integrated business continuity, endpoint, email and network protection tools, best practice guidelines, training resources and security monitoring tools/services — to help your organization maintain IT system productivity.

projexguard

ProjexGuard™ IT Management Solution:

- IT/CyberSecurity Management portal
- IT/cybersecurity planning, execution and monitoring tools
- NIST 800-171 assessment and compliance tools
- Online training center/cyber-security awareness training
- Virtual private office
- Incident response team
- RMM/SIEM reports access and analysis

ProjexGuard™

ProjexGuard™ is an integrated, layered IT/CyberSecurity management solution that includes step-by-step tools for businesses' seeking to achieve/sustain NIST 800-171 compliance. NIST 800-171 is a practical set of standards developed by the U.S. Department of Commerce and supported by the U.S. Department of Homeland Security (DoHS), U.S. Department of Defense (DoD) and many commercial security experts.

Solution Layer	Description/Core Functions	Modular Options
Backup & Disaster Recovery - Business continuity	Offsite cloud backup tools and services scaled to your data requirements. Disaster-Recovery-as-a-Service solutions include an on-premise backup appliance + cloud replication.	DRaaS enables complete environment spin-up, either on premise or in the cloud.
End Point Protection - Servers, desktops, laptops	Multi-vector cybersecurity endpoint protection, remote monitoring and management service with automated security patching.	Integrated help desk ranging from 8x5 to 24x7 support can be added for end user support.
Email Protection - Preventive cloud software filter	Anti-spam, virus, malware, phishing and denial of service protection blocks external threats before they reach your network.	Email continuity service — restores 90 days of email in the event of an email server failure.
Network/DNS Protection - Controls Internet activity	Network/DNS protection stops up to 90% of all web-borne malware before it can reach your network.	Develop and enforce granular and department-level acceptable web usage policies.
Network Protection/ NextGen Firewall - Application layer security	Hardware plus real time, integrated dynamic threat and intrusion protection services to protect against evolving threats.	Monthly Hardware-as-a-Service (HaaS) option — includes the cost of the appliance.
IT/CyberSecurity Management and Best Practices Portal	Network and security execution and assessment tools, best practices policy templates, NIST 800-171 audit/compliance tools, online training tools, and report monitoring capabilities.	DIY monitoring and tools included with endpoint protection - optional Projex IMC consulting and incident response services.
Security Information & Event Management (SIEM)	Collects information from internal network, presenting anomalies/changes and other potential threats. Sends daily alerts to enable proper/timely cybersecurity response.	Self-monitor dashboard or request monitoring services from Projex IMC virtual operations center.
